

AEGIS Crisis Console

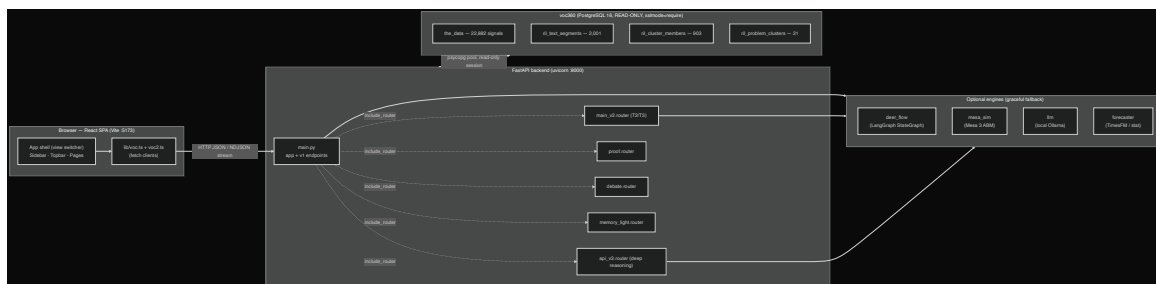

System Workflow Diagrams — companion to docs/SYSTEM_WORKFLOW_MAP.md

Generated from the dev branch · voc360 → graph → root cause → recommendation

7 DIAGRAMS · SVG + PNG + PDF

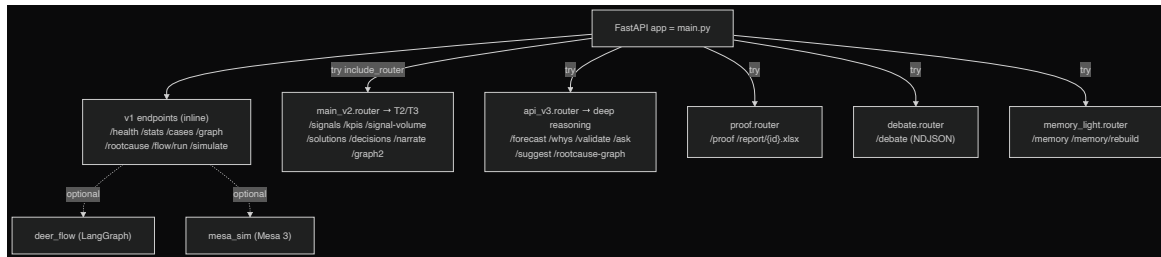

01 Top-level system map

Browser → FastAPI routers → optional engines → voc360 (read-only).

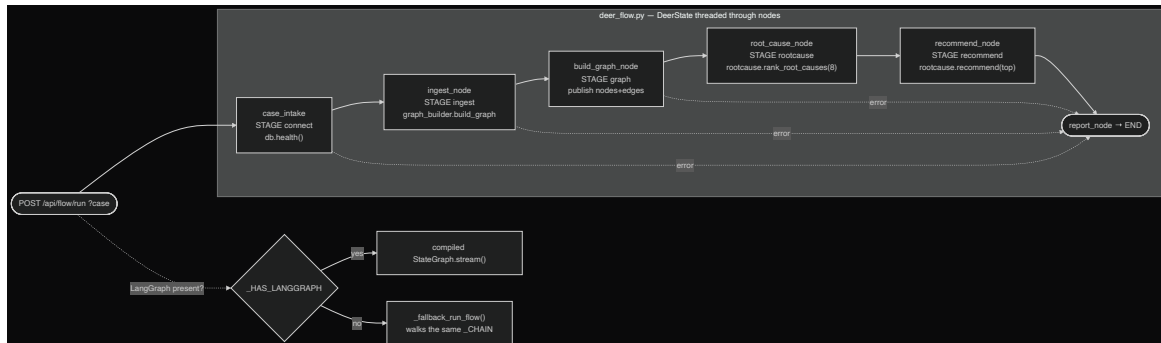

02 Backend app composition

main.py mounts each router behind try/except; engines are optional.

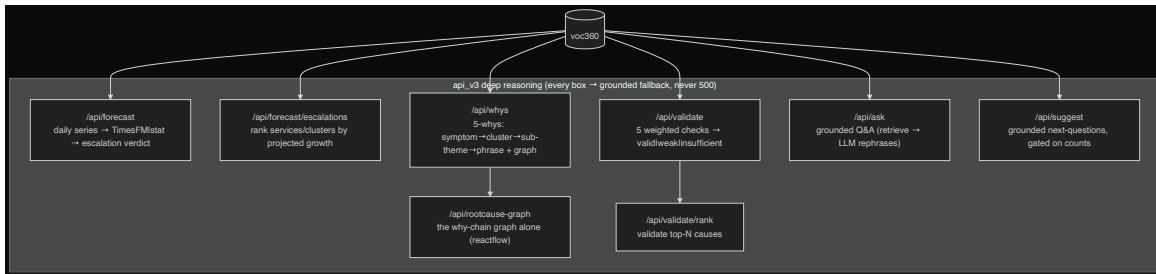

03 Deer Graph flow (streamed pipeline)

connect → ingest → graph → rootcause → recommend; LangGraph or pure-Python fallback.

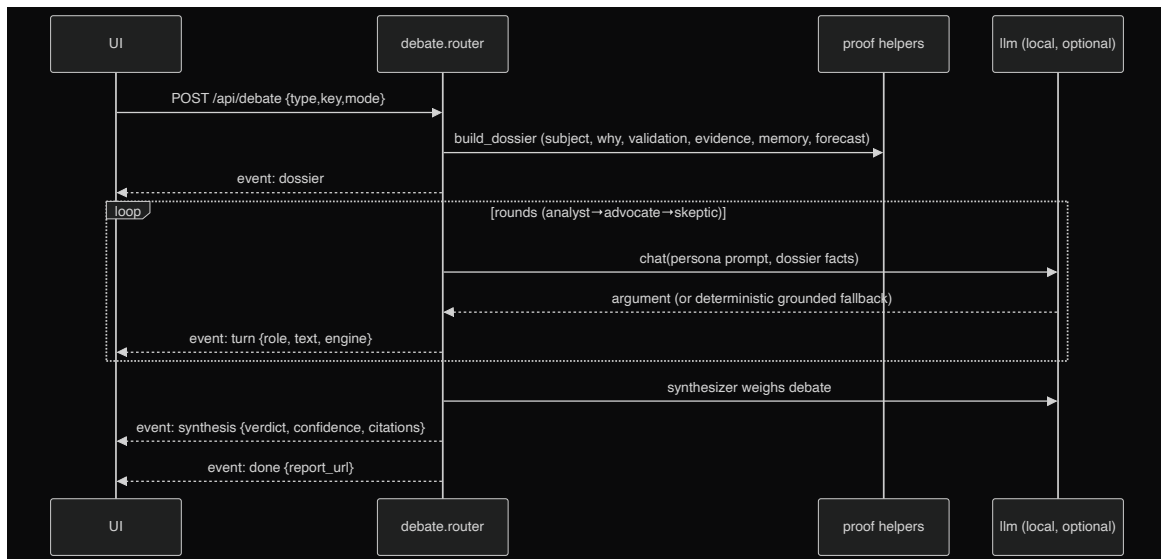

04 v3 deep-reasoning engines

forecast · whys · validate · ask · suggest — every box has a grounded fallback.

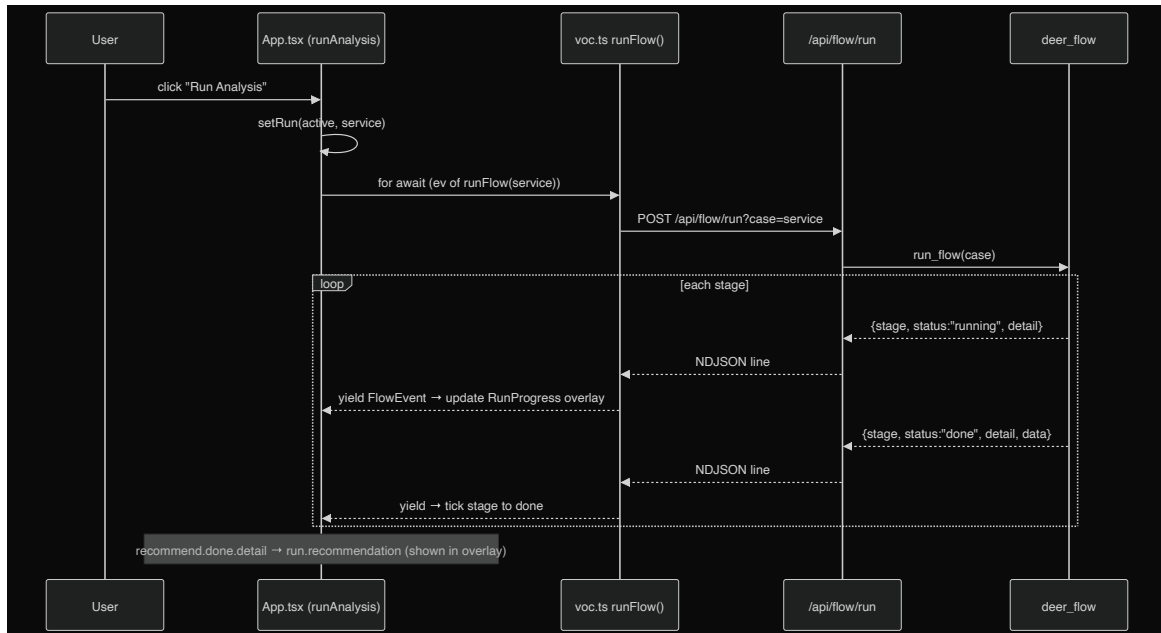

05 Multi-agent debate (sequence)

analyst → advocate → skeptic → synthesizer, over one grounded dossier.

06 Run Analysis — live streaming (sequence)

NDJSON FlowEvents drive the RunProgress overlay stage-by-stage.

07 Operator journey (master workflow)

Dashboard → Run → Graph → Root Cause → Solutions → Simulation → Decisions.
